Dissertation Committee:

Dr. Ravi Sandhu: Supervising Professor

Dr. Ram Krishnan

Dr. Palden Lama

Dr. Jianwei Niu

Dr. Gregory White

# Presentation Outline

- Introduction
- Background and related work
- Secure Isolated Domain (SID) Model
- SID Model in OpenStack
- SID Model in AWS
- SID Model in Azure
- Conclusion

# Introduction

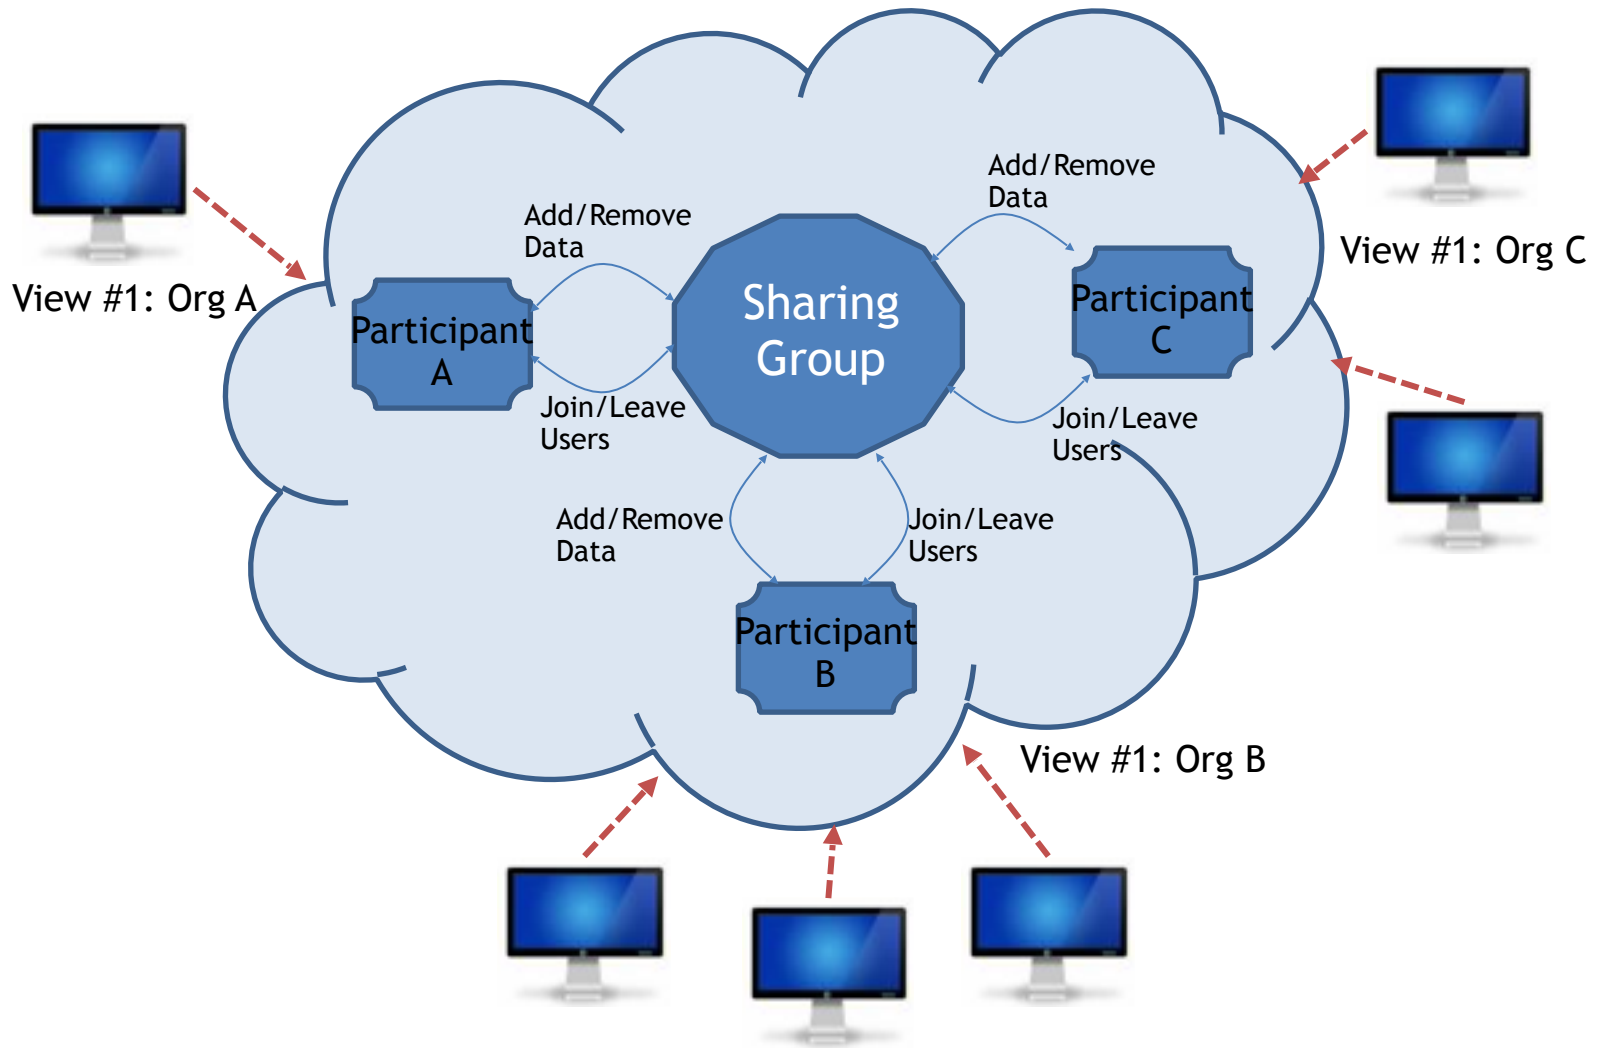

- Traditional Cyber Collaboration
  - Subscription services
  - Limitations
    - Organizations Sharing information through subscription.
    - Organizations are not actively participating in analyzing and processing the cyber information they submit.
    - Organizations don't directly interact with each other on sharing activities.
- Cloud IaaS Advantages for Cyber Incident Sharing
  - Virtualized resources
  - Operational efficiency
    - Light-weight and agile
    - Rapid deployment and configuration
    - Dynamic scaling
    - Self-service

# Background/Related Work

- Group-Centric Sharing
  - Sharing for a specific purpose or mission
    - E.g. Collaboration in joint product design.
    - E.g. Inter-organizational collaboration.
  - Brings users & objects together in a group
    - Secure Meeting Room

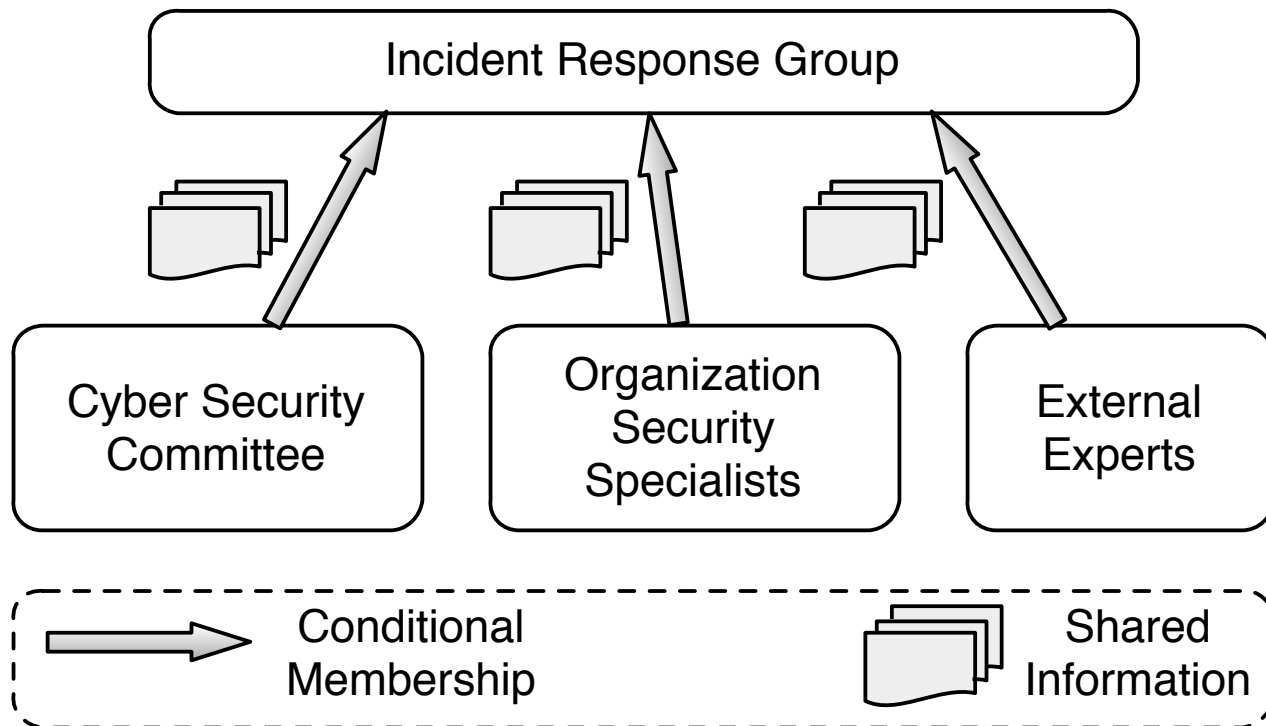

# Sharing Model in Cloud IaaS

Reference: Ram Krishnan, Ravi Sandhu, Jianwei Niu and William Winsborough, Towards a framework for group-centric secure collaboration, In Proceedings 5th IEEE International Conference on Collaborative Computing: Networking, Applications and Worksharing (CollaborateCom), 2009.

# Background/Related Work

- Community Cyber Incident Response

Adapted from: Ravi Sandhu, Khalid Zaman Bijon, Xin Jin and Ram Krishnan, RT-based administrative models for community cyber security information sharing. In Proceedings of the 6th IEEE International Workshop on Trusted Collaboration (TrustCol), 2011.

# Problem and Statement

- Problem Statement

*There is lack of access control models for information and resource sharing within collaborative groups in IaaS cloud platforms.*

- Thesis Statement

*Secure sharing information and resources in IaaS cloud can be achieved by a common access control model that is enforceable in the currently dominant cloud IaaS platforms (viz., OpenStack, AWS and Azure).*

# Scope

- Sharing models – sharing amongst a set of organizations
- Cloud deployment models – a single public or community cloud
- Cloud service models – focus on Infrastructure as a Service (IaaS)
- Scenario – Cyber Incident Response

# Outline

**Secure Isolated Domain Model  
(SID Model)**

```
graph TD; A[Secure Isolated Domain Model (SID Model)] --> B[OpenStack SID Model (OSAC-SID Model) (Modify Keystone)]; A --> C[AWS SID Model (AWS-AC-SID Model) (3rd party automated SID-service)]; A --> D[Azure SID Model (Azure-AC-SID Model) (3rd party manually simulated SID-service)]; B --> E[Conclusion]; C --> E; D --> E;
```

**OpenStack SID Model  
(OSAC-SID Model)**  
(Modify Keystone)

**AWS SID Model  
(AWS-AC-SID Model)**  
(3rd party automated SID-  
service)

**Azure SID Model  
(Azure-AC-SID Model)**  
(3rd party manually  
simulated SID-service)

**Conclusion**

# Outline

Secure Isolated Domain Model

# Enforcement - Policy

## Core Project Admin User Policy:

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Sid": "AllowSecAdminToListRolesUsers",
6       "Effect": "Allow",
7       "Action": [
8         "iam:ListRoles",
9         "iam:ListUsers",
10        "iam:ListPolicies",
11        "iam:GetPolicy"
12      ],
13      "Resource": [
14        "arn:aws:iam:*"
15      ]
16    }
17  ]
18 }
```

## Core Project Member User Policy:

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Effect": "Allow",
6       "Action": "s3:*",
7       "Resource": "*"
8     },
9     {
10      "Effect": "Allow",
11      "Action": "ec2:*",
12      "Resource": "*"
13    }
14  ]
15 }
```

# Enforcement - Across-account Access

User in org1 accesses resources in sid1:

AssumeRole in Org1:

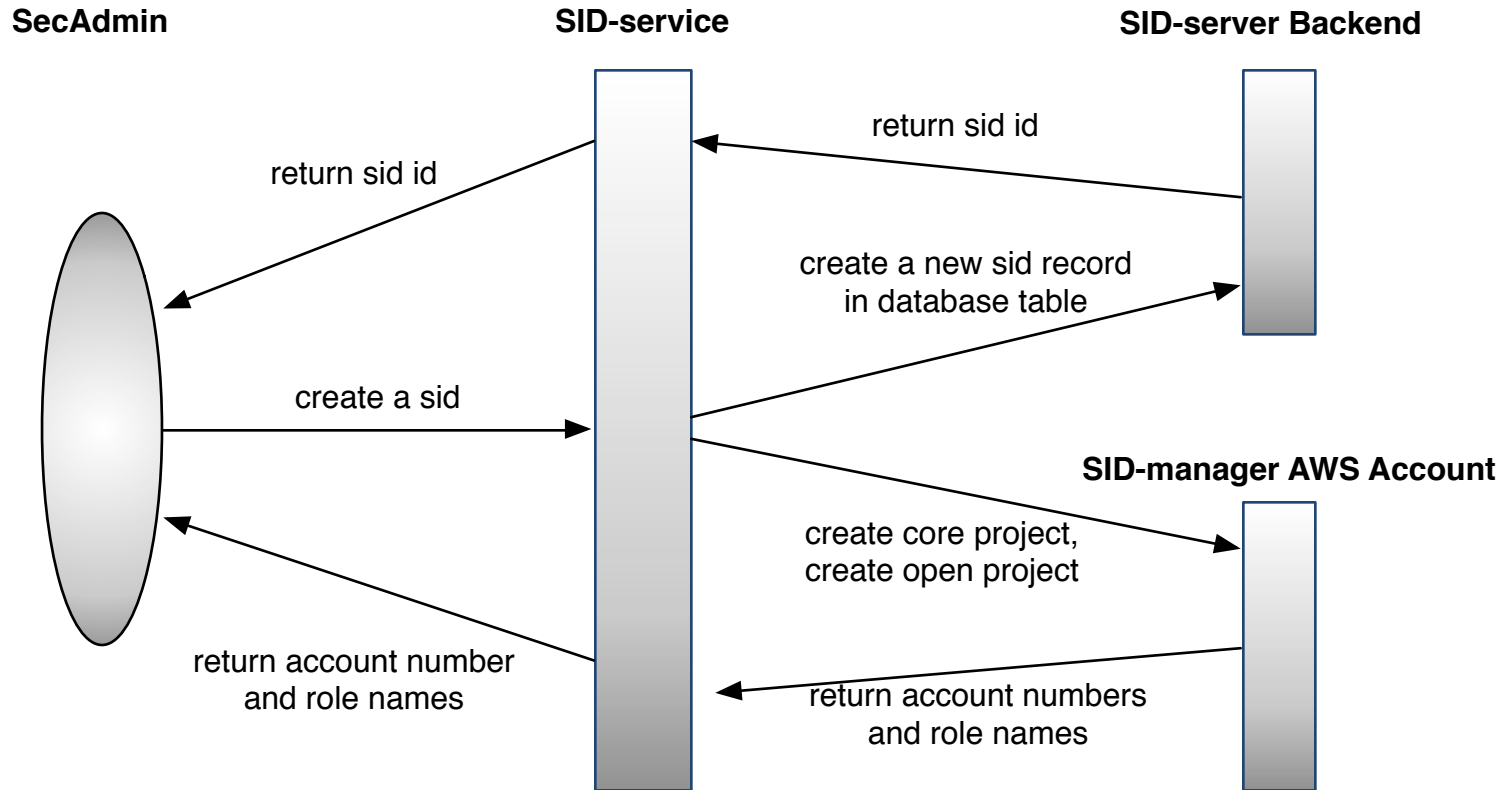

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Effect": "Allow",
6       "Action": "sts:AssumeRole",
7       "Resource": "arn:aws:iam::*:*"
8     }
9   ]
10 }
```

Trust relationship in a Role in sid1:

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Sid": "",
6       "Effect": "Allow",
7       "Principal": {
8         "AWS": "arn:aws:iam::123412341234:user/SipAdmin"
9       },
10      "Action": "sts:AssumeRole"
11     }
12   ]
13 }
```

# Enforcement

Secure Isolated Domain Model  
(SID Model)

```
graph TD; A[Secure Isolated Domain Model (SID Model)] --> B[OpenStack SID Model (OSAC-SID Model)]; A --> C[AWS SID Model (AWS-AC-SID Model)]; A --> D[Azure SID Model (Azure-AC-SID Model)]; B --> E[Conclusion]; C --> E; D --> E;
```

OpenStack SID Model  
(OSAC-SID Model)

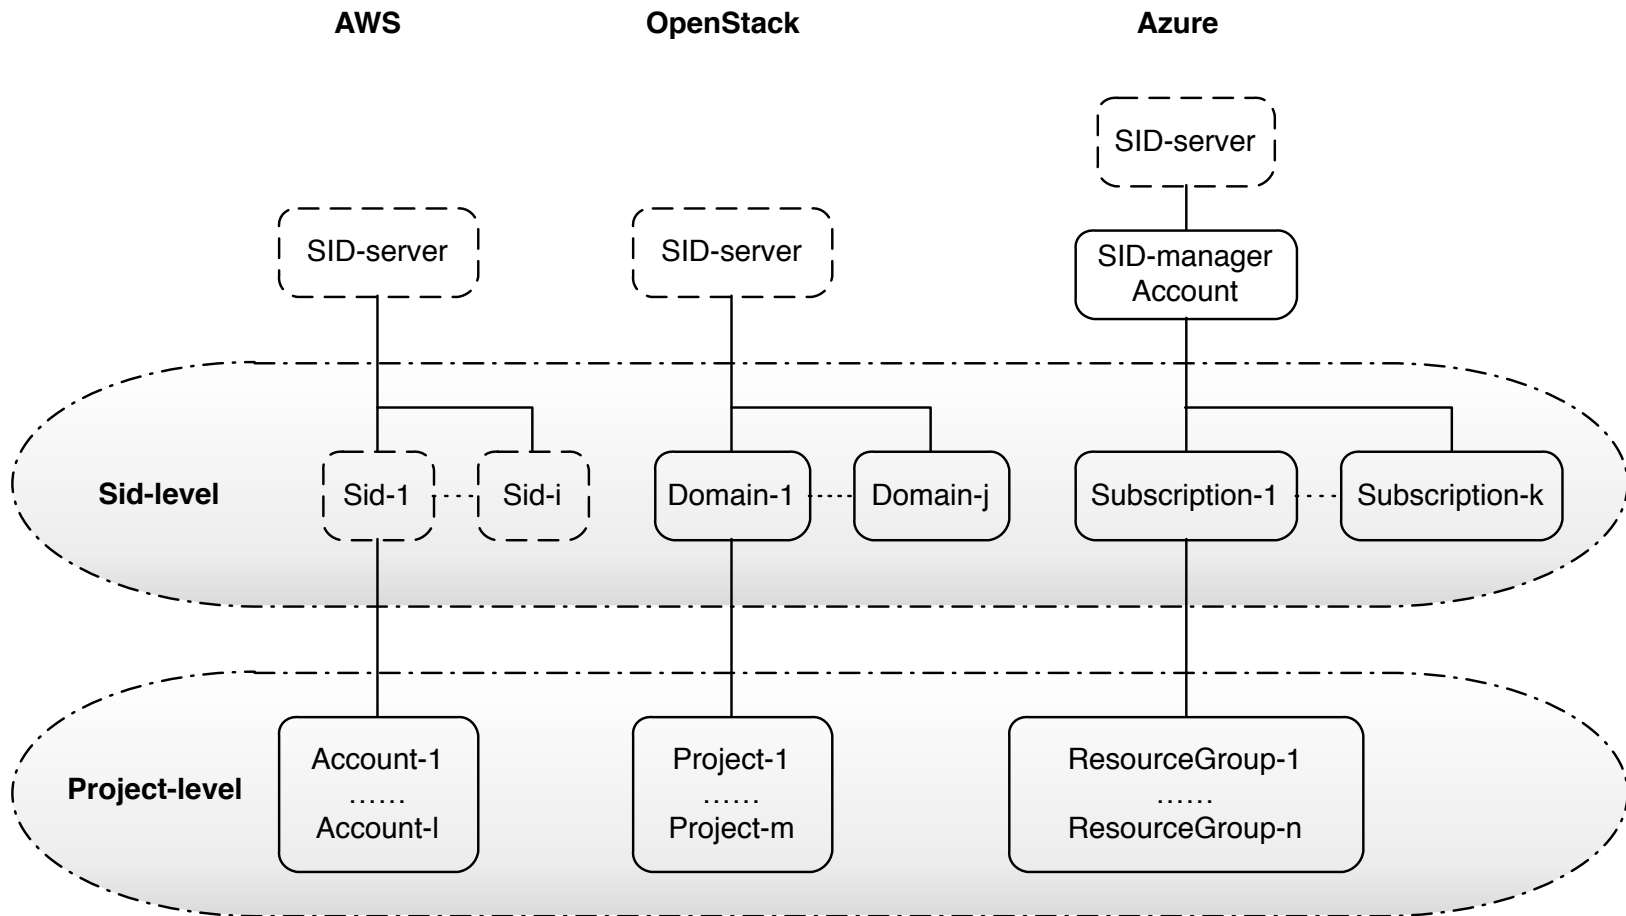

AWS SID Model  
(AWS-AC-SID Model)

Azure SID Model  
(Azure-AC-SID Model)

Conclusion

# Model Comparison

- Resource Containers:

# Model Comparison

- SID-services:
  - OpenStack
    - Modify cloud system itself
  - AWS & Azure
    - Build a third party SID-service server
- Roles:
  - OpenStack
    - Global roles
  - AWS
    - Local roles, with trust relations
  - Azure
    - Pre-defined roles & customized roles

# Conclusion and future work

- Developed a sharing model (SID-model)
  - Formal specification
- Applied the model to three dominant IaaS cloud platforms (OpenStack, AWS and Azure)
  - Defined access control models for each cloud system
  - Extend it with SID
  - Enforcement
- Compare SID-model in different cloud system
- Future work suggestions
  - Try more control on a group of organizations creating a sid/sip;
  - Try more fine-grained roles inside a sid/sip;
  - Apply the model to multi-clouds.
